**DETAILED ACTION**

1. Claims 20-38 remains pending.
2. This is a Non-Final rejection.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. **Claims 20-38 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,052,788.**

Both the current application ‘011 and patent ‘788 recites an array or plurality of firewall nodes/machines and the DNS process. However,

claims 20, 25, 30, and 35 of '011 recites first and second set of virtual hosts whereas '788 recites a plurality of virtual hosts. Thus, it is obvious the plurality of hosts can read on the claimed first and second set of virtual hosts.

Claims 20, 25, 30, and 35 of '011 recites interfacing an associated firewall machine with IP-compliant network and interfacing with a private network. Whereas, '788 broadly recites firewall nodes delineate one network segment from another network segment. The network segment can obviously be an IP-compliant network and another network segment can be the private network. The limitations of claims 20, 25, 30, and 35 in the current application are read on the limitations of claim 1 of '785.
